## **Installation of Flexstation Work Surfaces and Panels**

Complex projects require installation by a team of factory-trained certified personnel provided by OEI, our vendor. They offer the project management and expertise to get the installation done on a timely and secure fashion.

An onsite installation supervisor leads the installation team. Depending on the project, the right number of installers used. They have the product knowledge to make almost any installation run smoothly. Experience allows the supervisors to create natural workflows, to make assembly more efficient, identify shortages or missing components quickly for a faster remedy, and adjust the furniture in the field to adapt to adverse conditions.

Job sites with challenging requirements like restrictions on hours (nights and weekends only), personnel (union trades only), delivery conditions (no semis allowed), or location access (stair-carry or hoisted-crane conditions) can all be accommodated by our teams. Leaving the installation to the experts also simplifies projects that include secure locations such as correctional facilities.

There is no project too big or complex for the installation team. Installation charges apply and are included with the CSI quote provided for the entire project.
