

# FlexStation<sup>®</sup>

## DESKING SYSTEM

# COLLABORATION IS KEY

Collaboration is vital in today's classrooms and training rooms, creating the need for furniture that makes both independent and collaborative work easier to accomplish. The open nature of freestanding desking fosters a sense of cooperation in any environment, but it's thoughtful features unique to FlexStation that make it ideally suited to the task.

FlexStation's privacy screens are optional accessories making it as easy to create unobstructed sight lines for students in lecture halls as it is to create enclosed study carrels for them in libraries. Worksurface grommets and PowerUp® modules maximize usable space on the desktop in either situation without sacrificing power or data connectivity.

In addition to the PowerUp® modules that give users access to power and data on top of the desk and benefit students who bring their own laptops and tablets to class, integrated receptacles beneath the worksurface are available. These below-surface receptacles are ideal in computer labs, libraries, and other settings where the organization's equipment will be used as their discrete profile and out-of-the-way location discourage tampering.

Other features that make FlexStation ideal for collaborative training environments are also subtly located beneath the desktop. A shared leg can be used in place of two separate legs to support adjoining worksurfaces and increase the foot room beneath them, while facilitator desks with casters improve instructors' mobility and access to learning boards at the front of the room.

**Foot Depth** - of transitional legs is decreased to allow easy movement throughout the work area.

**Multiple-Height Worksurfaces** - are ideal for walk-up kiosks allowing users to work efficiently from a seated and standing position.

**Power/Data Module** - contains one pop-up duplex receptacle and two stationary data ports.

**Mobile Worksurface** - A variety of movable worksurfaces respond to the need for group meetings where mobility is key.

FLEXSTATION = VERSATILITY

Collaboration isn't limited to the classroom, and neither is FlexStation. In the office environment peninsula-shaped worksurfaces and mobile tables are spacious enough for client meetings or spontaneous gatherings.

For more lengthy collaborations with remote colleagues or consultants, FlexStation makes transitions and reconfigurations a snap. Ingenious connectivity components keep FlexStation (and you) connected to power and data at all times. Wire raceways provide subtle cable management throughout the environment, without the need for complex disassembling and reassembling. Desktop PowerUp® modules also allow users to transition themselves and their mobile equipment in and out without assistance.

Even in environments that require focused independent work, FlexStation's unparalleled access to data and power are appreciated. The PowerUp module with its pop-up duplex receptacle and pair of data ports is the most obvious access point. Pressing the module's cover opens and closes it. In the closed position, the data jacks remain stationary to prevent wear and tear on connections, but the duplex receptacle recesses beneath the desktop, leaving an unobstructed surface.

FlexStation can also be specified with integrated duplex outlets beneath the worksurface. These receptacles are housed in data troughs, which contain steel dividers for power and data separation and doors to keep the contents out of sight. Table-to-table connectors allow a single hardwired electrical connection to provide 10-wire power for an entire group of users with either type of access.

**Tool Rail** - allows users to locate paper management components wherever they are most convenient.

**Power/Data Trough** - is discretely covered to keep power and data at hand, but out of sight.

**Side Privacy Screens** - can be used in conjunction with rear privacy screens to create study carrels.

# SEAMLESS INTEGRATION

Your options don't end at data and power with FlexStation. A wide range of colorful finishes, laminates and fabrics allow the desking to integrate aesthetically into existing interiors, while a host of accessories may just make it worthy of being the jumping-off point for new designs.

Universal and Venus overheads provide much-needed locking storage solutions. They anchor securely to the frame of the desk via steel stanchions, or can be mounted directly to the wall with the use of load bars. Task lights mounted on the cabinets or shelves are easily powered by below-surface receptacles when their cords are routed through worksurface grommets.

Tackable screens add privacy and personalization, and can be combined with overheads or used to separate desks in back-to-back configurations. Multi-height tool rails put an array of paper management choices at your fingertips, while adjustable keyboard pads make sure those fingertips find typing as ergonomic as possible.

FlexStation components also integrate seamlessly with Series XXI® storage solutions including worksurface-supporting pedestal files. The freestanding bookcases, kiosks, and files are available in finishes that match the desking, and like the overheads Series XXI® cabinets can be locked to secure their contents.

A variety of worksurface shapes also make it easy to customize spaces. Piano, square shoe, and P-shaped peninsulas are perfect for spreading out large projects or hosting impromptu meetings, while transitional and end-of-run units used in combination with rectangular desks create command centers of all proportions. Adjustable Develop™ W-Bases can even be used in conjunction with FlexStation to make sit-stand desking possible.

With all of its possibilities, your only limit with FlexStation is your imagination.

**Beam Option** - allows access to the building power, data, and communication receptacles when placed against a wall.

**Panel Options** - include full and partial modesty panels for privacy in addition to the open beam design.

**Full Modesty Panel** - gives the desking a uniform look from every angle, even when files are stored beneath it.

**Full End Panel** - can be used to finish off worksurface ends or stand alone worksurfaces.

### FABRICS AND FINISHES

\*Product fabrics and finishes shown are reproduced as faithfully as possible within the limitations of the printing process.

#### COVER SHOT

Desk Laminate - Kensington Maple (LKM)  
Paint/Poly/Edge/Trim - Light Tone (LG )  
Screen Fabric - Mayer Fabrics Madras 376-001 Sangria  
Overheads - Light Tone (LG) paint with Kensington Maple (LKM) door fronts  
Alt3™ Upholstered Task Seating - Mustard Seed (A1MS)

#### PAGE 2/3 SPREAD

Desk Laminate - Nickel Evolv (LNV)  
Paint/Poly/Edge/Trim - Sand (SA)  
Navigator® Air Task Chairs and Stools - Grey Mesh with Mayer Fabric Motif 411-016 Pewter

#### PAGE 4/5 SPREAD

Desk Laminate - Sweet Corn (LZC)  
Desk/Shelf Paint - Cottonwood (CO)  
Edge/Poly/Trim - Light Tone (LG)  
Series XXI® Paint - Champagne Metallic ((CM)  
Screen Fabric - Mayer Fabric Equal EQ394 Opal  
Snap Task Chair - Mayer Fabric Foundation Sunflower  
Ped Cushion Fabric - Mayer Fabric Ecosphere Turquoise
